

Mechanical Engineer Internship

JoeScan is looking for a mechanical engineer to help us improve the world of sawmill scanning this summer. Responsibilities include:

- Gathering requirements, designing, and building a new multi-laser alignment station for our production team
- Laying out and generating product drawings for metal fabrication
- Playing with lasers and cameras and motors and conveyors and quadrature encoders and other cool hardware
- Helping to design, build, and improve our trade show demo with off-the-shelf components and custom 3D printed parts
- Eating awesome snacks and drinking great coffee and learning from a bunch of really cool and helpful people.

How to apply

Please send resumes to jobs@joescan.com. In the body of your email, briefly tell us about your favorite engineering project and why it was your favorite.

To be considered and to make sure you read this all the way to the end, reference the name of your favorite sci-fi character in the subject line of your application email.
